Title of the Event : Attitude determines Altitude

Organising Department : IQAC

Nature/ Classification of Event : Faculty Development Programme

Number of Participant : 42

Guest/ Keynote Speaker : Shri. John Silveira, State Coordinator, National Skill Qualification Framework

**Brief Report:**

Keynote Speaker mentioned that Attitude is created by our thoughts and we normally choose our thoughts. We are the architecture of our life and frame of mind. We take the decision from our mindset whether it is positive or negative. Attitudes are associated with beliefs and behaviour towards some subject. Attitudes are not stable. Our behaviour and interactions with others determines our 'height in life' and our success in our life. If we want to be successful in any area of life, we have to behave well, we have to interact with others in the right way, otherwise, we will lose our elevation and have to be prepared to have a shoddy life.

IQAC Coordinator welcomed and proposed vote of thanks.

**Brief Report:**

Experiential Learning deals with individual's direct experience. According to Kolb, Knowledge is continuously gained through both personal and environmental experiences. The speaker of the session Mr. Jyoti Sharma said that in order to gain genuine knowledge from an experience, the learner must have four abilities:

- The learner must be willing to be actively involved in the experience;
- The learner must be able to reflect on the experience;
- The learner must possess and use analytical skills to conceptualize the experience; and
- The learner must possess decision making and problem solving skills in order to use the new ideas gained from the experience.

Resource person briefed that most Most educators understand the important role experience plays in the learning process. The role of emotion and feelings in learning from experience has been recognised as an important part of experiential learning.<sup>123</sup> While those factors may improve the likelihood of experiential learning occurring, it can occur without them. Rather, what is vital in experiential learning is that the individual is encouraged to directly involve themselves in the experience, and then to reflect on their experiences using analytic skills, in order that they gain a better understanding of the new knowledge and retain the information for a longer time.
